

Online Games

Production Line

Online games hold a significant place in our company's activity. Modern technologies enable us to develop games with great multimedia content. Shockwave, Flash and Java technologies, which allow high quality bitmap and vector graphics along with the streaming audio and video for distribution on the Internet gave the foundation for developing online games of a new generation. At present time online games are completely comparable by quality with CD games. They include beautiful 2D and 3D graphics, involved action, high program logic and great number of levels.

We develop both single- and multi-player online games of all genres: Arcade, Sport, Board, Puzzle etc.

Air Hockey

Have you ever tested your reaction skills? No? Then this game is just for you! The objective is to hit the puck into the opponent's goal by means of moving a paddle around.

There are two ways of starting the game:

1. Enter the password
2. Choose the character

If you have already played then you will have received a password for the level that you reached. You can start at the next level by entering that password. Click **Password**, enter the password into the appeared text box. You are automatically transferred to the next level.

To start the game for the first time, you should click **Tournament**, choose among ten characters on the screen who you want to be. To complete the game you have to win in nine matches, each against different characters. Each character has its own style of playing. **Continue** starts the tournament.

Under the picture of each competitor there are seven small sections. When a goal has been scored, the next successive section turns red.

When you win you will receive a password for that level, which will permit you to proceed to the next level. The level number is shown on the screen.

To control the paddle use the mouse. There are ten levels in the game.

Made for RTL

Technical Details:

- Type: Flash
- File Size: 300 kb
- Game Screen: 700/500 pixels
